

Structure and Cell Biology of Viruses Lab Technician

<https://www.cicbiogune.es/people/nabrescia>

A Lab-Technician position is available at the Abrescia Lab in the CIC bioGUNE research centre near Bilbao, Spain, to support our work on structure-function studies of virus-host interactions and virus assembly. The project involves cryo-image processing and data analysis of viruses and virus-receptor complexes.

Applicants should hold a Master's degree (awarded within the last 3 years) and have a strong interest in structural biology or virology. Ideally, they should possess some knowledge in computing to support lab activities in electron microscopy, image processing, and/or methods development and programming.

The position (*Contrato en Practicas**) is initially available for 6 months, extendable for another 6 months.

Preferred start date: November 2024.

The CIC bioGUNE research center is equipped with an operative EM platform (with JEOL 200 kV and 120 kV 'feeder' microscopes) and has routine access to the nearby **Basque Resource for Electron Microscopy (BREM)** facility equipped with a Titan Krios G4 and Aquilos II. Additionally, the Abrescia Lab has regular access to other major infrastructures in the EU.

Application procedure

Interested candidates, please send a CV and a covering letter including contact information of two reference scientists to [form](#) and indicating **40372** as reference.

Reception of applications, before 5th November 2024

*The potential candidate must not have benefited from the same type of contract.

About the city: Bilbao is a vibrant city at the heart of the Basque Country, Northern Spain's most famous region. The Basque Country is a nurturing place for science with a fast-developing and advanced scientific community and infrastructure, please see <https://www.science.eus/en>
